

XIPHIAS PROJECT

Technical Specification

Alias Math Modeling Process

Our concept's main inspiration derives from naturally-driven design. Predatory fish, in particular, embody the agility and efficiency we aim to emulate.

Xiphias comes from the Latin name for swordfish, an iconic creature that ranks among the fastest inhabitants of the ocean.

Only its most essential features have remained after countless years of evolution. Its fundamental beauty has arisen from the stripping away of excess elements.

We aim to evoke this same principle by creating an aerodynamically efficient and highly emotional design. Therefore, our concept is a passionate, yet relevant design exercise for a small team of automotive developers who are capable of setting themselves apart from all others.

*Precision becomes passion.
Engineering becomes expression.*
